

## BEHA WI-FI

### Heater reset instructions

1. with the heater on, scroll the thermostat wheel on the side of the heater downwards so that the numbers on the floor start dropping to 5c.
2. Then continue to scroll (without stopping) and you will see "RE" (this will be flashing on the floor)
3. Then keep scrolling (not stopping) until "RE" is solid (not flashing). (Please note that the scrolling down must be continuous from when you start until you see RE flashing and then solid. Do not stop.
4. As soon as RE is Solid you must immediately turn the on/off rocker switch "off" and then back "on" extremely quickly. (Like a quick flick off and on, it is very important to flick it on and off rapidly) This procedure must be done within 2 to 3 seconds of you stopping Rotating the thermostat wheel.

Then you will see the Wi-Fi sign pulsating on the ground.

Now you have 3 minutes to add it to your app. (maybe get the app ready first before starting this procedure) If you run out of time then you can start the procedure again.
